

Materials used for ISOFLEX® - Insulating jackets

							
ISO-PTFE <i>anti-static</i>	ISO-ALU	ISO-PU	ISO-Silikon	ISO-VA	ISO-HT-VA 750	ISO-HT 700	ISO-HT-VA 1000
Description: Fibre made of glass fibre filaments with PTFE coating on one side. The PTFE coating (Teflon®) has excellent anti-stick properties. Colour: Standard version in black (optionally available in grey)	Description: Fabric made of glass fibre filaments with aluminized polyester film adhesively applied to one side. This flexible fabric provides good thermal resistance. The outer coating is ideally designed to keep steam out and has excellent reflective properties Colour: silver	Description: Fabric made of glass fibre filaments with a flame-resistant polyurethane coating. The Al pigments impregnated into it guarantee good heat reflection and provide an attractive alternative to aluminium foil clad fabrics. Colour: silver-grey	Description: Fabric made of glass fibre filaments with a silicon rubber coating on one side. This coating (weighing approx. 90 g/m³) contains aluminium pigments. Colour: silver-grey (also available with optional coating on underside)	Description: This product consists of a glass fibre fabric with a flame-resistant polyurethane layer. The Al pigment impregnated into it ensures good heat reflection and provides an attractive alternative to aluminium foil clad fabrics. Colour: silver-grey	Description: Fabric made of glass fibre filaments with a PU layer and aluminium pigments applied to one surface, VA reinforced and flame-resistant. This product has very good resistance to chemicals, excellent physical properties and can take very heavy mechanical loading. Colour: Grey	Description: This product is a glass fibre fabric for covering and thermal/acoustic insulation. Colour: natural	Description: Fabric made of glass fibre filaments with V4A core, consists of textured and twisted yarn. The carefully processed yarn guarantees exceptional insulation properties. This product is very resistant to chemicals, has outstanding physical properties and can take heavy mechanical loads. Colour: silver-grey
Area of application: Outer coverings for insulation padding / mats, anti-abrasive protective covers	Area of application: At relatively low temperatures as protective cladding and flexible insulation	Area of application: Flexible insulation, soldering protection, fire-retardant hangings, smoke-retardant hangings, expansion joints and seals	Area of application: Expansion joints, flexible insulation, soldering protection, fire protection and sealing	Area of application: Flexible insulation, weld protection, fire-retardant hangings, smoke-retardant hangings, expansion joints and seals	Area of application: Flexible insulation in high-temperature zones, exhaust conduits	Area of application: Flexible insulation, expansion joints, thermal and acoustic insulation	Area of application: Flexible insulation in high-temperature zones, exhaust conduits
Technical Data: Fabric in Atlas weave Weight of fabric: 425 g/m³ +/- 10 % Total weight with coating: 560 g/m³ +/- 10 % Thickness: 0.38 mm +/- 10 % Tensile strength: Warp > 3500 N/5 cm Weft > 2600 N/5 cm Temperature range: - 50 °C to 280 °C Short-term temperature resistance up to 315 °C	Technical details: Fabric in broken twill weave Weight of fabric: 650 g/m³ +/- 5 % Total weight with coating: 800 g/m³ +/- 5 % Thickness: 0.85 mm +/- 5 % Tensile strength: Warp > 650 N +/- 10 % Weft > 550 N +/- 10 % Temperature range: Outer surface coated with high-temperature-resistant PET film coating = resistant up to 250 °C Inner surface with high-temperature resistant polyurethane layer = resistant up to 200 °C	Technical data: Fabric in broken twill weave Weight of fabric: 660 g/m³ +/- 5 % Total weight with coating: 685 g/m³ +/- 10 % Thickness: 0.80 mm +/- 10 % Tensile strength: Warp > 4600 N/5 cm Weft > 4400 N/5 cm Temperature range: Untreated fabric up to 550 °C continuous Coated fabric up to 250 °C continuous	Technical data: Fabric in broken twill weave Weight of fabric: 420 g/m³ +/- 10 % Total weight with coating: 510 g/m³ +/- 10 % Thickness: 0.45 mm +/- 10 % Tensile strength: Warp > 3900 N/5 cm Weft > 2600 N/5 cm Temperature range: - 40 °C to 250 °C (for short periods up to 300 °)	Technical data: Fabric in Atlas weave ISO 9354 Weight of fabric: 660 g/m³ +/- 5 % Total weight with coating: 680 g/m³ +/- 10 % Thickness: 0.70 mm +/- 10 % Tensile strength: Warp > 2500 N/5 cm Weft > 2500 N/5 cm Temperature range: Untreated fabric up to 550 °C continuous Coated fabric up to 200 °C continuous	Technical data: Plain-weave fabric DIN 61 101-1 Weight of fabric: 1275 g/m³ +/- 8 % Thickness: 1.60 mm +/- 10 % Tensile strength: Warp > 3000 N/5 cm Weft > 1500 N/5 cm Temperature range: Fully fitted up to 700 °C (for short periods up to 750 °C)	Technical data: Plain-weave fabric DIN 61161/1+2 Composition: 100 % glass Weight of fabric: 620 g/m³ +/- 8 % Thickness: 0.80 mm +/- 10 % Tensile strength: Warp > 3000 N/5 cm Weft > 2100 N/5 cm Temperature range: With no mechanical load up to 700 °C continuous	Technical data: Plain-weave fabric DIN 61 101-1 Weight of fabric: 780 g/m³ +/- 10 % Thickness: 1.20 mm +/- 10 % Tensile strength: Warp > 1500 N/5 cm Weft > 800 N/5 cm Temperature range: up to 1.000 °C continuous
Fire resistance according to FMVSS302: Passed Resistance to fluids: Good resistance to industrial substances and cleaning agents	Fire resistance according to FMVSS302: Passed		Fire resistance according to FMVSS302: Passed Resistance to fluids: Good resistance to industrial substances and cleaning agents	Fire rating: BS 476: Part 7, 1997 Approvals: SBG Approval No. 114.180 BWB Approval
